What if the steps take your PC too long?

There are different steps that might take longer for your PC to perform than you would expect:

- Exporting all references from the EndNote Library to a RIS file
- Renaming or adding database names in EndNote (if you choose to do so this is however optional and does not influence the performance of the deduplication process)
- Re-importing the deduplicated references (RIS file created by Deduklick) into EndNote

If it takes more than a few minutes, consider **moving your original EndNote library to a local drive** (e.g. your desktop) instead of a shared drive, **especially if you work from home via VPN!** All steps will be performed much faster.

How to zip a RIS file if it is too big to be uploaded to Deduklick (>200 MB)

Right-click on your file's name, choose **7-Zip** and **Add to** xxx.**zip**.

The automatic import of the deduplicated RIS file into EndNote does not work

In case the automatic import of the RIS file into your empty EndNote library does not work on your computer:

1. Right-click the **zip file** in the **Downloads** folder, go to **7-Zip** and choose **Extract to**.

In the deduplicated RIS file (coming from EndNote), some data have been lost

Comparing data in the original EndNote Library and the re-imported deduplicated file, you may have noticed that in certain fields (e.g. Keywords, ISSN, URL, Notes) only the first term of a whole list of terms is visible; any additional terms have been lost. **How can this be avoided?**

Example from EndNote's Keywords field:

			٩	📋, 202 Sumi	mary <mark>Edit</mark> PDF >

To preserve all the original data, you need to **remove carriage returns in your initial EndNote** Library, BEFORE you export the records into a RIS file for upload to Deduklick.

Here's a step-by-step guide* on how to do this in EndNote 20:

- **1.** Select all the references you want to export.
- 2. Select Library, then Find and Replace.
- 3. Select a field in which carriage returns should be removed (e.g. Keywords).
- 4. Set the cursor into the Find text box. Select Insert Special, then Carriage return.
- 5. In the **Replace with** text box type a semicolon; and make sure to **add a space after the semi-colon** or if you prefer a space before AND after the semicolon.
- **6.** A window will pop up informing you how many references contained carriage returns and asking you to confirm that you want to replace them. Select **OK**.
- 7. A window will pop up telling you how many changes were made. Select **OK**.

Problem solved:

Record from the initial EndNote library, carriage returns replaced with ; (before RIS export)
